Dheeraj Namburu

New York, NY | dheerajnamburu@gmail.com | 615.947.6217 | dheeraj.si | LinkedIn | GitHub

Senior software engineer with 7 years of experience turning partner and researcher requirements into production release pipelines, integrations, and agent tooling, including MCP tools and agent skills.

EXPERIENCE

Microsoft | Senior Software Engineer | Nov 2020 to Present

- Owned end to end design and implementation of an ML model delivery pipeline with researchers, PMs, and OEM engineers, serving over 1,000,000 machines at 10x prior delivery throughput.
- Defined telemetry requirements with HP, Acer, and Lenovo engineers and built collection pipelines returning OEM test data to ML researchers for model validation.
- Conceived and built the Windows release MCP server handling over 100,000 calls daily, giving partner agents bounded read only queries over release tickets, payloads, and runtime state for troubleshooting.
- Built approval gated model promotion for internal partner pipelines, added an agent skill that files requests against the contract, and fixed bad inputs during initial runs.
- Designed and built orchestration for Windows on premises publishing through WSUS and Update Catalog with one peer; wrote the design spec and was credited by name in the 2023 general availability announcement.
- Designed change detection with Azure Logic Apps and Pipelines, ingesting over 1,000,000 data points daily through Blob Storage; staged models for testing and released after PM approval via work items.
- Cut release portal page loads from over 60 s to 2.4 s under load through in memory caching and storage query optimization with bounded concurrency.

Cisco Systems | Full Stack Software Engineer | May 2019 to Nov 2020

- Built a Java/Angular/MongoDB ServiceNow integration for a 60,000+ employee audience.

Goldman Sachs | Software Engineer Intern | May 2018 to Aug 2018

- Built a capitalization table retrieval feature used by 500+ investment banking analysts.

INDEPENDENT PROJECTS

- **CommandGate |** commandgate.ai | Built an AI desktop technician (Tauri, Rust, React, TypeScript): agents diagnose, repairs run only after approval, with Ed25519 signed evidence reports and a hash chained audit log; a 21 fixture offline suite scores diagnostic answers.
- **Fouro Chat |** fouro.ai | Built an LLM chat product on Cloudflare Workers and D1 with OpenRouter, Clerk, and Stripe subscriptions; implemented account scoped memory, embedding retrieval, fixture based evaluations, and per plan request and token limits.
- **FilmyCam |** dheerajnamburu.com/filmycam | Built and published an iOS camera with 128 editable film looks, live image processing, and photo export using SwiftUI, AVFoundation, and Core Image.

TECHNICAL SKILLS

Languages: C#, TypeScript, Python, Rust, Java, SQL, Swift
AI & Integration: MCP servers, agent skills, Claude Agent SDK, OpenAI Agents SDK, LLM evaluations, REST APIs, webhooks
Cloud & Delivery: Azure Pipelines, Logic Apps, Blob Storage, Node.js, Cloudflare Workers, D1

EDUCATION

Brown University | B.S. Computer Science and Economics | 2019
